

The Need for Gym Exercises and the Imminent Benefits**Sarita¹, Dr.Richa khugshal²**¹Research scholar(Lingaya's vidyapeeth, Faridabad Haryana)²Professor(Lingaya'svidyapeeth,FaridabadHaryana)**Abstract**

Exercising of any type and in any form comes under the regular physical activity, which helps in keeping you fit, in order and far more energetic than you may otherwise think. Exercise is important in maintaining health, and creating difference in the field of activities that one may like to get involved into. The long and short term benefits of undergoing exercises are enormous, and this enormity is just far more exciting than can be thought about.

The research and review paper showcases significant benefits of exercising on your body systems and the temperament levels. In fact it is not only the body systems that show improved performance, but thinking also gets improved too.

The research paper finds out the ways of reducing the stress, anxiety and strain from the muscles and the brain through the means of exercising. The positive impact of all of this can be seen in the form improvement in the self-esteem, upgrading of the self-confidence and moreover there is sharpening of the memory.

Exercising on regular basis is also instrumental in development of the muscle as well as the bone strength. There is also less chance of reducing the heart disease, occurrence of fluctuations in the blood sugar levels, and extremely reduced chances of occurrence of cardiovascular diseases.

Aerobic exercises are above all other forms of exercising regimen, and this also includes the cardio exercises. Most of the aerobic exercises like the ones which include brisk walking are effective enough in reducing osteoporosis. In short, it means that people who exercise are always healthy, irrespective of their age or gender. The research paper has its focus on taking into the view the idea that roles behind concept of exercising, and the key changes that are undertaken when people start exercising within the artificial subsystem or in their natural surroundings.

Keywords: *Exercising, Aerobic Exercises, Exercising Benefits, Gym Exercises*

Introduction

Physical activity is basically the name given to the movement of body and change in posture resulting from the skeletal muscles. This movement requires spending of energy. It is significant to point here that “Physical Activity” does not mean you are exercising. However, physical activity involves exercising, which is indeed one of the inherent parts. Exercise follows a very structured approach, and has the purpose behind it. As the popular saying goes – “Body with Sound Health Has a Sound Thinking” and it is quite right.

If your mind is not balanced you cannot reap the benefits of exercise in true sense, and all your efforts would not produce any worthwhile results whatsoever. People, who are weak, appear to be dull or problems in walking are not fit for the exercising.

People having a strict and regular exercising regimen would always be ahead of others in every sense. Regular exercising activity makes the individual happy too. But, it is very important to understand that exercise does not necessarily mean that you have to make visits to the gym or any formalized exercising club. Exercise is valuable in averting and even paying for critical health issues like coronary heart disease, osteoporosis, obesity, depression and for that matter any form of diabetes.

Cardiac restoration exercises are highly special and innovative means of physical activity, which advances cardiovascular system for inhibition and convalescence of cardiac disorders and diseases. A properly designed exercise program will improve the overall health, build patience, and dawdling many of the effects of aging.

Regardless of your age or the type of your body build up, exercising always helps an individual to remain in shape and be perfect.

Maintaining the routine exercising module also helps in keeping the cholesterol levels at bay and well managed. When we exercise on regular basis we are reducing the excess of our body weight and also dropping the blood pressure.

Exercise offers a pleasurable way of spending their amazing time. Leading an inactive life without the presence of exercise will bring the life to a complete standstill. By including a regular exercising schedule in your daily life, you are taking the step ahead towards building a good and balanced life.

Preserving physical fitness and keeping the exercising regimen held together would give rise to physiological benefits.

II –Literature Review

Proper exercising helps in maintaining the body balances and biochemical reactions inside the body. Light weight exercises are useful for keeping everything in far more organized way than otherwise. Here is the review of literature that showcases development of research and the outcome of exercises over the period of years.

Long term exercise module will bring phenomenal changes in depression and anxiety (Morgan and Goldston 1987). Exercising in a more detailed way would reduce the anxiety and there is a physiological enhancement

lasting for almost 4 hours (Hannum and Kasch, 1981; Raglin and Morgan 1987). Anxiety reduced by means of exercises followed by brief interventions brings relaxation (Bharke and Morgan in 1979).

Physical activity is crucial for advancement of regular and normal human functionalities and this is also essential in adding to the longevity. Gordon Larsen et al (2007). Entertaining activities aid in the development of social skills and keeps the balance of motor functions and all of it further enhances the development of real creativity (Gleave & Cole-Hamilton, 2012). Introducing a strong physical regimen early in childhood through the maintenance of muscular fitness as well as cardio respiratory system leads to good results. On the other hand inactive children grow and become inactive (Janssen & Leblanc, 2010).

There are several instances where the physical activity either in the home or elsewhere will help in keeping the chronic diseases at bay or protect the body on all times. (Warburton, Nichol & Bredin, 2006). Maintaining regular activities in adults helps in the development of stamina and vigor and ensures betterment of life in the adults for more than decade in the adult population of the UK (DH, 1996). Following a sedentary and sitting lifestyle has deep effect on the mental wellbeing of the population and may result in the stress, anxiety and other kinds of social and physical problems (Netz, Wu, Becker, & Tenenbaum, 2005). Irregular or absence of physical activities from the life of individuals may result into obesity and many other types of severe malfunctioning and diseases. Such diseases may often be considered as irreversible in nature. (King et al, 2001); (Hu et al, 2004).

Many people who visit the gyms for physical activities and exercising with the intention to improve the quality of life may are often mistaken by irrelevant idea (WHO, 2004). Only a mere 30 minutes of moderate physical activity undertaken by the individuals in the premises of gyms do not cause any substantial control over the weight gain in adults (DH, 2004, Blair, Lamonte & Nichaman, 2004). Due to more stress laid on the children and growing adults in the schools and colleges, less and less number of students is spending their time in the physical activities, Hardman and Stensil (2003).

People who are consistent with the physical activities are capable of maintaining their functional fitness as they continue to grow old and become grappled by the infirmities (O'Brien-Cousins & Gillis, 2004; Leino-Arjas,

Solovieva, Riihimaäki, Kirjonen&Telama, 2004. Regular exercising in gyms or elsewhere in the natural surroundings is known to cause reduction in physical effects related to the human aging process,(McMurdo,2000). People falling in the lower social strata have lower accessibility to physical activities and it is for this reason they show lower rate of inactivity (Hillsdon, Foster, Naidoo& Crombie2004). In the similar fashion, Rowe, Beasley and Adams (2004) found out that people who symbolized the lower socio-economic set of patterns were leading a slow and sluggish lifestyle in comparison to the higher status groups.

Health activities and exercising in the leisure time has a direct proportion to the income generated by men and womenHealth for England Survey (1998). It is also suggested that physical activities undertaken during the time of leisure is useful in reducing all kinds of risks associated with the early death. Further, for maintaining the health, it is essential to maintain regular kind of physical activities (Harvard Alumni Study, 1978, 1986, 2000. Health Professionals'Follow-up Study, 1996. Aerobics Longitudinal Study, 1998,Nurses HealthStudy, 1997, Whitehall Study, 2000).

III. Objectives

The principle objectives of this research paper are drawn here:

- 1) to search for the gyms where weight management is practiced, adding to health benefits;
- 2) to explore the benefits of new age gyms on health understanding of the youth;
- 3) to exploit the ease of doing exercises in hi tech gyms;
- 4) to assess the approachability of gym goers to the gyms.

Physical Activity and Different Perspectives

A good maintenance of physical activity on daily routine basis would be influential and useful in the development of body and maintaining the posture for long times to come. Such an activity will reduce the occurrence of several types of chronic diseases including the occurrence of type II diabetes, cancer and the cardiovascular diseases on the whole. Individuals who do not indulge in any kind of physical activity will result in the reduction of their cognitive thinking as much as it results in extensive lethargy.

Physical activity and gym exercising is important for the grown-ups and the older population, however the extent and frequency to which these exercises are to be done vary from one point of time to another. The effect of physical activity on cognition helps in building up of higher values and noteworthy increases in cardiorespiratory fitness although this fitness may not be considered at par with the older population. The strength and physical fitness of individuals who come under the younger population is quite high over the other group of people who do not exercise or are poor in exercising.

The neurocognitive functions related to physical exercising can be ascertained on much higher terrain as compared to people who are not exercising at all. The cerebral cortex shows an increased activity among the exercise takers, while those who are on the passive mode of exercising or gym activity show a remarkable downsizing. As the result, the memory functions as well as the power to memorize shows a lower rate among the people who do not exercise or show a kind of inconsistency.

The biological mechanisms through which means the perception about a particular activity is heightened by means of physical exercise training is far more enormous than one could actually think about. In point of view of the Spirduso, is known to ameliorate the health conditions in the individuals and such amelioration are going to happen on an elaborate scale.

A few of the early and most convincing results about physical exercising comes from the real fact that exercising, here in case of animals, it is the active running, there is going to be induced synaptogenesis, which means that new neurons are built up consistently and these are integrated within the network, ultimately resulting into active functions and overall development.

The reality of life is that while young people are moving gradually towards a hi tech life style, they also need to be sure that moving to such a direction would eventually put their physical fitness on a complete halt. Young have to show the quality of their lives, and this is when gym exercises as well as other forms of exercising activities would bring the change and young people show their prolonged fitness.

Research Methodology

It is noteworthy to recognise the sentiments of the individuals who go out openly for the advanced gyms look for style and advancements as much as they look for cool workouts. The research methodology realized for studying as well as analysis of the need of gym and exercising in the hi-technology environments is based on internet research and comparison. All such research and comparison will be undertaken by forming an interpretation of secondary resources. Apart from the secondary resources, a few primary resources were also consulted to form a conclusive statement and drive home the points of understanding.

However, it is also to be noted that there were no conceptual or other type of references were made with respect to the research conducted on the basis of primary data. Furthermore, the extent of studies and research methodologies that were incorporated in the preparation of this research paper is focused on the patterns and the gym equipment used thereof.

During the process of writing research paper, all the necessary secondary data has been analysed, corroborated following various literatures, online magazines, and several other journals, besides consulting the gym owners to find out exact and latest data.

Since the incidence of COVID 19 there has been only a limited obtainability of the material and other form of evidence available about the need of young population to visit the gyms. Infact, the critical COVID 19 situation has also restricted flow of realistic data about on type of products that the prospective gym goers like to go around with.

Comparing and Analysis of the Gyms in Delhi

Name	Gym Features	About the Gym	Parking	Guests/Visitors
Fitness First, Connaught Place	Weight management, Goal Specific Workouts, TRX Suspension, Strength & Endurance, Body building, Dance, Aerobics, Zumba, Spinning and Indoor Cycling, Yoga, Cross Functional, good cardio equipment and a perfect techno gym.	Fitness First is an international gym operating in at least 16 different countries. The fascinating part of gym is that it operates with 7 international standard clubs.	Not much of parking, although the gym is quite close to metro station.	Males/Females Toddlers/Grownups
Chisel, Punjabi Bagh	Bodybuilding, Workout and Weight Training with Personal trainers, General trainers and helpers. However, the gym has Dumbbells up to 50 kilogram. 2: No decline bench. 3: Weight plates	Chisel is the state of the art and the new age wellness brand with branding from Virat Kohli.	Spacious parking facility, but not in the vicinity of metro station.	Males/Females Toddlers/Grownups
Olympia , Greater Kailash 2	Spinning, Group Classes, Power Yoga, Combine Training, TRX Training, Cardio Equipment, Strength Training Equipment, Stretching Area, Music and Video Entertainment, Zumba Classes, Yoga, Zumba, Aerobics, Pilates, Core And Abs, Cardio Gym, Kick Boxing, Mixed Martial Arts The trainers are friendly and highly qualified, and the facilities are great. The variety of gym equipment is limited.	It is superb and innovative gymnasium and fitness centre, spread over 15000 sq.ft. and 3 stories. It is one of the biggest gyms with enough of spacing facility.	Good parking facility, although it is not spacious. The gym is not in the vicinity of metro line.	Males/Females Toddlers/Grownups
Gold Gym, East of Kailash	Spinning, Personal Training, Free Trial for 7 Days, A Week, Certified Trainers, Group Classes, Indoor Steam and Sauna, Power, Yoga, Cardio Equipment, Strength Training Equipment, Stretching Area, Music And Video Entertainment, Zumba Classes, Yoga, Zumba, Dance, Aerobics, MMA and Kickboxing, Cardio Air Conditioned, Gym, Kick Boxing, Mixed Martial Arts	The Gym began its functioning in the Venice California in 1965, and soon became the hotbed for the development of training techniques, equipment and nutritional concepts leading to the foundation for modern fitness revolution. In 1975, Gold's Gym received international attention when it was featured in the major motion picture, 'Pumping Iron,' becoming the 'Mecca of Bodybuilding'. The Gym has more than 700 facilities across the globe with exclusive heritage, and involvement as being the specialist in fitness and lifestyle.	Gold Gym has a superb parking facility, and it is next to Kailash Colony Metro Station	Males/Females Toddlers/Grownups

Analysis and Discussion

The gyms in Delhi have an international character, and these are also equipped with the best and innovative methodologies and equipment, which is essential for the overall development of body and physique. The younger lot, and this includes both males and females are regular goers to these hi-tech gyms and attracted to the methodologies and innovation out there. There is no point of contention here that the modern gyms of Delhi hold a special place in the young population for many obvious reasons. Much of it also relates to the lifestyle requirements as much as the gyms have to do with work outs and maintaining the overall well-being of the individuals. The gyms that were researched and the data collated in respect of that shows that gyms do not provide direct connectivity to the members. These are the regular gym goers, which reach the gym site on their private vehicles. Almost every gym has got new age exercising equipment, and the best guides, which provide customized training to its members. The ultimate need of exercising in these high tech gyms is therefore settled and fulfilled.

The benefits of exercising in these gyms are also complemented by the idea that the atmosphere and the inner climes are spacious with plenty of room space that allows comfortable walking. These gyms are also supplied by the state of the art gym and yoga equipment. Almost every hi tech and corporate gym is offering facilities like the TRX Training, Strength Training along with Gym Kick Boxing as well as mixed martial arts. There is a mix and match of the activities carried out in these gyms, which means that the individual gym goers are enjoying the music and video entertainment, Ab and Cardio Exercises.

In this respect, the need of exercising and carrying the regular work outs has always been the right way and means to overcome monotonous lifestyle, stress and social obligations within the typical Indian family. Since the gyms are flexible with regard to their working hours, this is indeed one of the key beneficial factors to think about. Regardless of the areas where these gyms are located in Delhi, almost each one of these gyms have the same exercising facilities, entertainment and much of everything alike.

The best thing about exercising in such gyms is that individuals feel relaxed and contented. The options to exercise are unlimited, and all such options are available at one place. And above all, gyms have maintained an international character, which is the right way of treating the body.

The innovative and hi-tech gyms in Delhi are valuable addition to the quality of life, and at the same time, such gyms bring an overall change in the personality and thought of the individuals, leading to better life management.

Suggestions

The new millennium has given a new way of life for the younger lot, who have out of sheer curiosity taken towards the development of their physicality, and engage in lifestyle activities that brings a completely changed personality and a broader outlook. However, these new age and innovative exercise modeling centers also need to be looked from a different perspective, especially as discussed in the context of changing times and health challenges, like the COVID 19 situations.

While the size and style of the hi- tech gyms cannot be undermined, there is always the need to take the current COVID 19 situation into consideration. India has already become the second in line as far as the active COVID 19 cases are looked. Through the online research and the literature studied, these gyms do not have an efficient and regular testing of the COVID 19. It means that the individuals who are regular visitors are not checked in a legitimate way on about their COVID condition. The only method used is temperature monitoring, and if the individual who enters the gym space does not have high temperature, it is understood that that the individual is healthy and fine and allowed to go for the work outs.

Therefore, it is suggested that only such individuals or members are allowed into the gym who have the certificate from government body or local dispensary that shows that the individual is free from Corona Virus. In this manner, a diseased free and congenial environment for the work outs could be maintained, and a consistent healthy atmosphere is created thereof.

Another factor to look into is that although the hi technology and new age gyms are offering spinning, group Classes, power yoga, Combine Training, TRX Training, and provided with Cardio Equipment, Strength Training Equipment, Stretching Area, Music and Video Entertainment, Zumba Classes Yoga, there is always a unique need for every member, and this should be judged by gym authorities on various parameters. One of the suggestions

therefore is that these gyms should not only work on the general parameters but specific parameters should be looked inside on all occasions.

And finally the trainers working out here are friendly and have the necessary qualifications; they also need to regularly upgrade their qualifications from time to time keeping in line with the international standards. More importantly, such trainers should have an international reputation and name in the field of gym and workouts.

Conclusion

In the league of concluding the research paper, it could be inferred that body building not necessarily means staying healthy or likewise keeping yourself fit and structured. Rather there are the times when you begin to feel that too much of exercising activity leads to complete physical depreciation as well as reducing your mental health. It could be concluded herewith that individuals maintaining a strong exercising regimen may also get affected in terms of their body and health. But by overall means, exercising in gyms or at homes help in developing the personality of the individuals.

Acknowledgements

The research probed into the assumptions as to why people like to visit the health centers and gymnasiums for the development of the body and muscle mass. The research paper makes substantial efforts to present a fair idea of various forms of exercises in our routine lives. I recognize the data and other pieces of knowledge offered to me in preparing the research paper were useful and effective in many ways. It helped me to know the significance of exercising as well as the body building measures.
